ENERGY MANAGEMENT

What is ISO 50001?

ISO 50001 provides a framework for establishing energy management best practice to help organisations to improve their energy efficiency in a logical, controlled and systematic way. ISO 50001 has been structured to align with other popular industry management system standards.

Benefits of ISO 50001 Certification

- Energy cost savings (often up to 20%)
- Reduced greenhouse-gas emissions & carbon footprint
- Improved operational efficiencies & maintenance practices
- Greater knowledge of equipment efficiencies
- Increased energy awareness among staff
- Informed decision-making processes from system design through to operation
- Tangible action to back-up statements in CSR policy
- Improved corporate image & credibility among stake holders, regulators, customers, prospective clients & the public

Why choose Certification Europe?

Certification Europe is the world’s leading accredited certification body in relation to energy management systems certification. Having issued the world’s first accredited EN 16001 certificate in 2009, Certification Europe were the first accredited certifier of ISO 50001 in Western Europe.
